PROFILE

Fullstack developer with 3+ years building web applications across React, Next.js, Node.js and MongoDB. Developed a custom hotel management system that replaced manual book-keeping, giving the director full visibility across operations and drastically reducing internal theft. I'm the kind of developer who stays up chasing a bug not because I have to, but because leaving it unsolved isn't an option for me.

PROFESSIONAL EXPERIENCE

Fullstack Developer 02/2026 – Present
Gopsal Global Limited

- Built a vehicle intake system that pulls car model data automatically from the FRSC database via registration number, eliminating manual entry errors
- Integrated Paystack webhooks to automatically mark jobs as completed once payment was confirmed, removing manual interference from the payment-to-completion flow
- Developed an analytics dashboard giving management live visibility into weekly and monthly income, and vehicle status across pending, in-progress, and completed stages

Freelance Fullstack Developer 04/2025 – 08/2025
Rockhills Hotel

- Replaced the hotel's manual book-keeping process with a custom digital management system, giving the director full visibility across operations
- Automated record management across departments, drastically reducing internal theft and increasing operational transparency

Freelance Fullstack Developer 09/2025 – 11/2025
Banister-Staff

- Migrated the client's website from Tilda to a fully custom-built platform, increasing conversion rate by 45%
- Handled full deployment including DNS configuration, transactional email setup via Resend, and tracking integration with Google Analytics and Meta Ads

PROJECTS

ByteCart E-commerce Platform 

Online tech store with product management and secure checkout

- Built a full e-commerce platform for tech products with product listings, search, filtering, and checkout simulation from scratch
- Implemented secure authentication and authorization protecting all user account routes and personal data
- Optimized Mongoose database queries for faster product retrieval as catalog size scales
- Applied CORS policies and request rate limiting to block malicious access and prevent abuse

Geocoordinates Navigation App 

Real-time location tracking and nearby place discovery

- Built a location-based web app that detects the user's real-time position and maps routes to nearby places such as gas stations
- Calculated live distances between the user and surrounding locations to support faster decision-making
- Added distance-based sorting so users can instantly prioritize the closest available options
- Refined route accuracy and map interaction through iterative testing cycles

Anonymo Anonymous Chat Application 

Private, real-time chat without data storage

- Built a real-time chat platform using Socket.io where all messages exist only for the duration of an active session

- Implemented server-side time synchronization to keep messages ordered across all connected users
- Handled unstable network connections gracefully to prevent message loss during drops
- Ensured complete privacy by automatically wiping all session data upon disconnect

SKILLS

Frontend

HTML5, CSS3, JavaScript, TypeScript, React.js, Next.js, Remix.js, Tailwind CSS, SASS, LESS, Zustand, Framer Motion, shadcn/ui

Tools & Integrations

Git, Stripe, Paystack, Resend, Multer, Supabase, Axios, SWR, React Hook Form, Yup, Google Analytics, Meta Ads

Testing & Deployment

Cypress, Vercel, Netlify, Render

Backend

Node.js, Express.js, MongoDB, Mongoose, Redis, Prisma, REST APIs, Socket.io

Authentication

JWT, Sessions & Cookies, OAuth / Google Auth

EDUCATION

Electrical/Electronics Engineering

University of Benin

Bachelor of Engineering (B.Eng) Electrical/Electronics

11/2019 – 01/2025 | Nigeria
